

Manufacturing

Video Conferencing Managed Services in manufacturing

Businesses are continuously looking for ways to effectively communicate and collaborate while simultaneously cutting costs and gaining competitive advantage. The market forces impacting manufacturing supply chains today are driven by the consumer and their constant expectation for price reductions, innovation and time-to-market reductions.

To address all three, businesses need to look at new methods for effectively managing supply chains. Traditionally, high purchase costs for infrastructure, the need to find, hire and retain specialist skills to support and manage video conferencing, along with the scepticisms over reliability, security and benefits of using video, has discouraged wide scale adoption; but not anymore.

Minimise the need for local and international travel, saving time, money and your carbon footprint.

Enjoy high definition and security.

Increase collaboration, interactivity and discussion.

Enjoy around the clock, global support - real people, speaking your language.

These challenges are now a thing of the past. UCi2i's video conferencing managed services can relieve you from those technical frustrations, management costs and need for infrastructure, delivering a reliable, secure, supported and high quality video experience.

Supply chain management

Manufacturing requires constant management of suppliers and third parties. Video conferencing enables suppliers to coordinate together simultaneously, face to face, at any time, without the need to travel.

Product development and R&D

Larger manufacturers have developers spread across the globe. Visiting these developers and making sure all the work is on track would usually require a lot of time, effort, and of course travel. Video can empower developers from anywhere in the world to collaborate together on projects in a fraction of the time it used to take. Specialists from multiple regions can work together to produce the best products cost-effectively and instantly.

Training and professional development

Through video conferencing, all workers can receive the same training simultaneously whilst reducing the cost of trainers and travel. It can all happen in one place, the Virtual Meeting Room. UCi2i's content sharing platform maximises the reach and value of multimedia presentations for corporate training. Anyone can easily create multimedia training presentations from any video conferencing endpoint and archive for on-demand access.

For collaborative business on the move. Wherever you are. UCi2i

Efficient quality management

Those responsible for quality management need to oversee several plants at the same time and suppliers are expected to solve problems quickly. With video conferencing, time used to make these important decisions can be reduced and a number of plants can be managed effectively from one location. We enable manufacturers to effectively manage complex supply chains where the responsibility for different steps in a process continually shifts from one supplier to the next; back in-house and out again.

Making sure foreign partners are following your critical standards allows you to easily and instantly inspect your third party's contribution to your product and be sure that they are accountable to your quality standards.

Building stronger relationships

People buy from people. Businesses grow on trust and capability. Collaboration and innovation occur best in a face to face, real-time environment that leads to stronger relationships with more people.

UCi2i provides manufacturers with the ability to collaborate and innovate over long distances, overcome cultural differences more quickly and coordinate activities amongst different time zones. Our B2B platform creates a secure path through firewalls for instant visual communications with suppliers, outsourced partners and customers.

Customer relationships management

The newer the client, the more frequent and accessible the conversations need to be. Daily video conferences in the start-up phase of relationships keep new projects on track and increase the odds of the desired outcome; customer satisfaction.

Talent acquisition

Using video conferencing to find, hire and retain staff is not new. Doing that face to face easily and often, is. Being able to pre-interview before the candidate is brought to headquarters eliminates time wastage and also lets the manufacturer demonstrate its flexibility and technically advanced workplace. Equally, video conferencing allows highly skilled workers who want more job flexibility to work effectively from a home office or remote site.
